Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 58-71, drawn to a vehicle wheel positioning restraint, classified in class 254, subclass 88.
- II. Claims 72-75, drawn to a method of supporting, leveling, restraining a position of a vehicle, classified in class 254, subclass 1.

The inventions are distinct, each from the other because:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can be used to practice another materially different process. For example, the apparatus can be used as a modular machine tool table modular work positioning apparatus wherein the "obstruction" is a work stop abutment to positng a workpiece in an x-direction during machining of the workpiece.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
